**Our workshops are for educational purposes only. We do not provide CME credits.*

Central Drugs Compounding Pharmacy has partnered with industry expert **Mitchell Ghen, DO, PhD**, to present our most compelling workshop for Anti-Aging professionals. Together with **Nayan Patel, PharmD**, this Advanced IV workshop will provide the tools and knowledge on complex techniques to grow your healthcare practice and provide the care your patients need.

We have helped hundreds of practitioners add value and depth to their existing practices. As one of the nations largest source of injectable compounded solutions serving more than 39 states, our team of clinical pharmacists share their expertise through our IV Nutrition Prescriber Success program and consultations with our participating practitioners.

We provide a certificate of completion. Our workshops are limited in size so that the presenters and the participants are free to interact, share knowledge, and leave with all of their questions answered. In addition to learning the advanced techniques of IV therapy, we focus on the practical application for your business. Our shared meals and networking opportunities throughout the 2-day workshop enhance the learning experience.

Course Objectives:

- ☑ Introduce advanced IV techniques including for infectious diseases, inflammation, diabetes, neurodegenerative disorders, and immune support system.
- ☑ Advanced IV techniques for patients with compromised renal function, autoimmune disease, and challenged cardiac functions.
- ☑ Selective difficult IV interventions including fatigue, adrenal support, pregnancy, chelation, and addictions.
