**Our workshops are for educational purposes only. We do not provide CME credits.*

In partnership with **Mitchell Ghen, DO, PhD**, Central Drugs Compounding Pharmacy and **Nayan Patel, PharmD** presents our most popular workshop for Anti-aging professionals. Together we have helped hundreds of practitioners get started and add or develop profitable IV nutrition therapies to their existing practices. As one of the nation's largest source of injectable compounded solutions serving more than 39 states, our team of clinical pharmacists share their expertise through our IV Nutrition Prescriber Success Program and consultations with our participating practitioners.

Our workshops are limited in size so that the presenters and the participants are free to interact, share knowledge and leave with all of their questions answered. In addition to the foundations of IV therapy, we focus on the practical application for your business. Our shared meals and networking opportunities throughout the 2-day workshops enhance the learning experience.

Course Objectives:

- Know when IV nutrition is useful for your patient
- How to safely make and administer IV therapies
- Knowledge of the basic components and which to use in specific conditions
- Side effect recognition and the remedies
- How to monitor and assess a patient's progress
- Necessary equipment and nutraceuticals
